### Most Popular

**HamScope** - HamScope is a freeware windows multi-mode communications package for amateur radio that supports: PSK31 BPSK and QPSK RTTY ASCII MFSK16 PACKET CW. Support radio control interface for several ICOM, TenTec, Kenwood, and Yaesu transceivers. Compatible with DXbase LOGic 7 RYLogit TRX-Manager YPLOG. By KD5HIO Glen

**WinPack** - Popular ham radio packet windows application. By G4IDE (RIP)

**Win TNC** - G7JJF wintnc software

**KaGold and PkGold** - Performance Software for AEA and Kantronics TNCs Recognized Leader in Packet Amtor RTTY Baudot Pactor Gtor ASCII CW Morse support

**AGW Packet Driver** - SV2AGW packet radio driver, runs TCP/IP protocol over radio, support windows 95/98/NT and several devices like baycom and, E5DXL 9600 G3RUH compatible modems, DRSI and Sound cards by SV2AGW George Rossopoulos.

**XPWare** - It offers support for AEA, Kantronics, SCS/Paccomm and Hal controllers. The program also offers full transceiver control for most of today's HF radios. The program also support DX Cluster monitoring

**Picture Packet** - A Windows95/98/NT control program for Terminal Node Controllers. In its Lite mode it's all the software many packet users may ever need, and it's free. Receive and display of full color, high-resolution images and audio files

**NBF** - Packet radio program for 32-bit Windows platforms. Works with a host mode TNC, FlexNet, AGWPE or telnet.

**Graphic Packet** - GP for ms dos and ms Win by DD3DJ

**Packet Terminal Interface** - Simple Windows based TNC interface program Designed for ARES operation, simple operator interface to connect and perform communication functions, control operator programs screens before operations Both receive and transmit screens Simple Windows based TNC interface program Designed for ARES operation Simple operator interface to connect and perform communication functions Control operator programs screens before operations Both receive and transmit screens

**PKTerm 99** - PKTerm 99 host mode terminal software for the Timewave/AEA TNCs takes advantage of the true multitasking capabilities of Windows 95,98,NT.

**Embaycom 2.1** - Baycom modem emulator, EMBAYCOM.ZIP for HF 300 baud Packet EM1200M2.COM - for 1200 VHF Packet Tested with BAYCOM-soft v1.5 and 1.6

## 2-Tone Decoder Software

Instantly decode fire dispatch tone frequencies using sound card

## Software for packet radio use

Pages: 12 [ >> ]

**AGW Packet Driver** - SV2AGW packet radio driver, runs TCP/IP protocol over radio, support windows 95/98/NT and several devices like baycom and, E5DXL 9600 G3RUH compatible modems, DRSI and Sound cards by SV2AGW George Rossopoulos.

[ Hits: 11844 | Votes: 21 | Rating: 4.29 ]

**BPQ32** - A user group established by John Wiseman G8BPQ/GM8BPQ and Ron Stordahl AE5E (ex N5IN) for BPQ32 - AX.25 NET/ROM compatible node software for Windows.

[ Hits: 581 | Votes: 0 | Rating: 0.00 ]

**Clusse** - Free DX cluster server software package for amateur packet radio

[ Hits: 3553 | Votes: 5 | Rating: 8.00 ]

**dnx274.org** - dnx274.org - cb-mailbox dbo274 and the famous packet radio mailbox software openbcm

[ Hits: 202 | Votes: 0 | Rating: 0.00 ]

**Easyterm EZT3271** - Easyterm for Windows(3.xx and above) is a sophisticated commercial application written for the amateur operator who wants to utilize all of the features of the AEA, HAL, Kantronics or SCS (PTC-II) modems from Packet to AMtor, FACTOR, FACTOR-II(PTC-II), Gtor(Kam+), Clover(HAL) or PSK31 (PTC-II).

[ Hits: 3785 | Votes: 6 | Rating: 3.67 ]

**Embaycom 2.1** - Baycom modem emulator, EMBAYCOM.ZIP for HF 300 baud Packet EM1200M2.COM - for 1200 VHF Packet Tested with BAYCOM-soft v1.5 and 1.6

[ Hits: 5862 | Votes: 7 | Rating: 4.15 ]

**Ezp140** - Easy Packet Radio program for TAPR-style TNCs

[ Hits: 2266 | Votes: 1 | Rating: 6.00 ]

**FlexNet** - FlexNet Group in Darmstadt, Germany, group of people who spend their time in developing software for Amateur Packet-Radio purposes. The main project presently is the PC/FlexNet package written by Gunter Jost, DK7WJ.

[ Hits: 1824 | Votes: 6 | Rating: 4.33 ]

**G4PDQ PacketCluster Tools** - G4PDQ's PacketCluster routines to make PacketCluster a little more interesting for the user and a little easier for the SysOp

[ Hits: 1720 | Votes: 5 | Rating: 6.20 ]

**Grafik Packet** - Windows Packet radio program by DH1DAE, Ulf, versions available for win 95/98, dos and os/2

[ Hits: 1533 | Votes: 1 | Rating: 10.00 ]

**Graphic Packet** - GP for ms dos and ms Win by DD3DJ

[ Hits: 6911 | Votes: 15 | Rating: 5.80 ]

**HamScope** <sup>POP</sup> - HamScope is a freeware windows multi-mode communications package for amateur radio that supports: PSK31 BPSK and QPSK RTTY ASCII MFSK16 PACKET CW. Support radio control interface for several ICOM, TenTec, Kenwood, and Yaesu transceivers. Compatible with DXbase LOGic 7 RYLogit TRX-Manager YPLOG. By KD5HIO Glen

[ Hits: 86491 | Votes: 188 | Rating: 7.12 ]

**HamServ** - Another way of having your own bbs, using AGW Packet engine. HamServ is a TCP/IP Server program that runs under 32 bit windows and offers support for AX25, HTTP, NNTP, POP3, SMTP, and TELNET. Ideally it should be run under the AGW Packet engine, with the add on TCP/IP driver, it then allows for simultaneous connects via the internet and via packet radio, but it can of course be used stand alone, in which case people will be able to connect to it via the Internet.

[ Hits: 2922 | Votes: 5 | Rating: 4.40 ]

**Impulse Systems** - Impulse Systems offers several innovating products: F6FBB Language Editor and WinPack CoDec

[ Hits: 933 | Votes: 10 | Rating: 8.00 ]

**KA Win** - KaWin supports multiple Kantronics TNCs and multiple radio transceivers with an intuitive, graphical interface, setting a new standard of performance for digital radio communications.

[ Hits: 4154 | Votes: 5 | Rating: 3.60 ]

**KaGold and PkGold** - Performance Software for AEA and Kantronics TNCs Recognized Leader in Packet Amtor RTTY Baudot Pactor Gtor ASCII CW Morse support

[ Hits: 14390 | Votes: 38 | Rating: 6.09 ]

**Lan Link for Windows** - Lan Link for Windows by G3ZCZ, Internet interface to CXCluster, Controls PK-232, PK-900, PK-88, KAM, KPC-3, MFJ1278, and TNC2, PSK31 via the sound card in the PC, eQSL interface

[ Hits: 2805 | Votes: 6 | Rating: 4.50 ]

**LAN-LINK for windows** - Smart multi-mode controller software, contest, logging, APRS, and PSK31 via Sound card.

[ Hits: 4993 | Votes: 26 | Rating: 6.27 ]

**LinPac packet radio terminal** - Linpac is an extensible Linux packet terminal that supports easy access to concurrent connections (streams), PBBS/FBB forwarding, and support for adding external commands

[ Hits: 830 | Votes: 1 | Rating: 10.00 ]

**MacTNC** - MacTNC is simple, configurable terminal software used by amateur (ham) radio operators to control a TNC (terminal node controller). MacTNC performs most of the same functions of other terminal software, but includes buttons for standard commands, and allows the user to configure additional buttons for special purposes. MacTNC works only user Mac OS X because it relies on Unix components of the current operating system.

[ Hits: 5262 | Votes: 5 | Rating: 5.40 ]

**MSYS** - Un-official home of MSYS the multi-user BBS program for Packet Radio. This software is available for free use by all licensed radio amateurs.

[ Hits: 971 | Votes: 1 | Rating: 1.00 ]

**MUBAY** - The multiuser/multitasking BayCom Packet Terminal Driver program is a general purpose communications package for communicating with a BayCom modem attached to your IBM-PC/clone in conjunction with the TFPCX Baycom driver software. The software will also work with a normal TNC if it supports KISS mode, such as the Kantronics range.

[ Hits: 1028 | Votes: 0 | Rating: 0.00 ]

**MUTNC** - The multiuser/multitasking BPQ Packet Terminal Driver program is a general purpose communications package for communicating with a packet TNC or Baycom modem attached to your IBM-PC/clone in conjunction with the BPQ Node software.

[ Hits: 857 | Votes: 0 | Rating: 0.00 ]

**NBF** - Packet radio program for 32-bit Windows platforms. Works with a host mode TNC, FlexNet, AGWPE or telnet.

[ Hits: 8502 | Votes: 7 | Rating: 7.00 ]

**NcWinPTC** - NcWinPtc is a terminal program for the SCS controllers PK232 and PK900(with all files). Includes also many other programs for pactor devices such us Ptc II SCS, Ptcplus SCS, Z80 SCS.

[ Hits: 3809 | Votes: 17 | Rating: 6.88 ]

**OpenBCM** - The BayCom-Mailbox is an amateur radio/citizen band AX.25 Bulletin Board System with AX.25 store and forward capabilities. The software is available for Linux, DOS and Win-NT. OpenBCM is opensource and freeware.

[ Hits: 1065 | Votes: 1 | Rating: 5.00 ]

**OscarDelta IP Over AX.25** - This is a packet radio software developed for amateur radio operators to provide IP communications. You can chat, send/receive e-mail, surf the web and so on via radio depending on your bandwidth. You don't need a TNC. You might have all of TNC features via SoundCard using SoundModem.

[ Hits: 991 | Votes: 23 | Rating: 8.87 ]

**Packet Engine Pocket PC** - Packet Engine For PocketPC (Windows Mobile 5 and more). It can be used with KISS TNCs only.

[ Hits: 1638 | Votes: 2 | Rating: 7.00 ]

**Packet Terminal Interface** - Simple Windows based TNC interface program Designed for ARES operation, simple operator interface to connect and perform communication functions, control operator programs screens before operations Both receive and transmit screens Simple Windows based TNC interface program Designed for ARES operation Simple operator interface to connect and perform communication functions Control operator programs screens before operations Both receive and transmit screens

[ Hits: 6832 | Votes: 12 | Rating: 4.67 ]

**PacketCluster DX statistics** - This program extracts statistics from a dx.dat file to show numbers of spots for each country on each band

[ Hits: 1235 | Votes: 1 | Rating: 10.00 ]

**Paxon** - New packet radio generation software made in germany

[ Hits: 4230 | Votes: 17 | Rating: 8.17 ]

**Picture Packet** - A Windows95/98/NT control program for Terminal Node Controllers. In its Lite mode it's all the software many packet users may ever need, and it's free. Receive and display of full color, high-resolution images and audio files

[ Hits: 10098 | Votes: 9 | Rating: 7.00 ]

**PicturePacket** - A Windows95/98/NT control program for Terminal Node Controllers. In its Lite mode it's all the software many packet users may ever need, and it's free

[ Hits: 678 | Votes: 1 | Rating: 10.00 ]

**PkRattCE** - TNC Terminal Software for the Windows CE 2.x Handheld PCs

[ Hits: 2326 | Votes: 12 | Rating: 3.25 ]

**PKTerm 99** - PKTerm 99 host mode terminal software for the Timewave/AEA TNCs takes advantage of the true multitasking capabilities of Windows

95,98,NT.

[ Hits: 6491 | Votes: 26 | Rating: 5.73 ]

**PKTerm for windows** - Pkterm 99 is a host mode terminal program for the timewave and aea tncs. it works with windows 95, 98, and nt.

[ Hits: 1999 | Votes: 3 | Rating: 9.00 ]

**RadioDXCluster** - MacOSX configurable terminal software used to control your TNC (Terminal Node Controller) to connect with your local AR-DX Cluster using your radio. This program combines features contained in MacTNC, a TNC control program, and NetDXCluster (formerly MacDXCluster), similar software that accesses DX Clusters via the Internet rather than a radio link.

[ Hits: 1690 | Votes: 3 | Rating: 4.00 ]

**RCOM for Linux** - Terminal program for serial device.

[ Hits: 2319 | Votes: 4 | Rating: 2.00 ]

**RXclus** - RXCLUS is a free amateur radio software especially designed for the DX'ers and SWL's wanting to receive the informations transmitted by packet radio on the DX-cluster system. It supports also telnet protocol.

[ Hits: 5127 | Votes: 16 | Rating: 7.86 ]

**Simple Terminal** - Windows program that only works with PTC-I and PTC-II TNC.

[ Hits: 1481 | Votes: 1 | Rating: 10.00 ]

**SV1AIZ BBS** - A program for running your own BBS without a tnc, using your sound card or any other way with AGWPE.

[ Hits: 1390 | Votes: 2 | Rating: 2.00 ]

**SV2AGW AGWBBS** - AGWBBS is a program that manages the messages that you have downloaded from your local BBS using AGWFWD.

[ Hits: 691 | Votes: 1 | Rating: 8.00 ]

**SV2AGW AGWTerm Packet Terminal** - This program needs no other explanations because it is just a terminal program. The only difference is that it is multitasking. This means that you can have multiple connects and you can YAPP without restrictions. You can receive as many YAPPs as you wish simultaneously. If you have more than a RadioPort (You have more than a TNC) you can connect in any RadioPort. You can have also unlimited number of connections (about 100).

[ Hits: 2533 | Votes: 4 | Rating: 4.00 ]

**SV2AGW Packet Engine Professional** - This is a brand new program based on the well Known "AGW Packet Engine/ AGWPE". It is a special Windows utility for amateur radio packet users that interfaces multiple packet programs and multiple TNCs (Terminal Node Controllers) / modems: lets one TNC be used by more than one packet program, lets one packet program use more than one TNC, lets your sound card be used as a physical TNC or modem, no need to buy a TNC , has an optional 'TCP/IP Over Radio' feature that lets you send TCP/IP data sentences via packet to internet gateways

[ Hits: 2253 | Votes: 3 | Rating: 3.67 ]

**TNC** - The Packet Terminal Driver program is a general purpose communications package for communicating with a packet TNC attached to your IBM-PC/clone. The program was written to work with the Kantronics range of TNC's but should work with any TNC that is connected to a serial port on your computer.
